

## **TECH BULLETIN**

**TECH BULLETIN NUMBER: 0105**

**DATE: December 08, 2003**

**Subject: V 1.8 / Transfer speed and High ac protection**

**Models affected: ME and RD Series**

V 1.8 increases speed of the transfer switch to approximately 12-16 ms. Also High Vac protection is added so that the transfer relay disengages at 145 Vac. This protection is for downstream loads so that high ac voltage is not passed through the inverter to ac loads.
